Thank you for choosing the **EVILUSIONS** Repeat Cycle Controller Box.

## OPERATING INSTRUCTIONS

The Repeat Cycle Controller box is designed to continuously turn on and off 110v lights, small motors, or solenoid valves. The internal relay is rated at 10 amps, and you should never switch over that.

- 1) To set up, plug items to be cycled on and off into female outlet lead, and plug male outlet lead into wall outlet, surge protector, or extension cord. Then plug in 12vdc wall adapter. As soon as wall adapter is plugged in power will begin to cycle on and off.
- 2) One dial controls the amount of time the power is turned off in each cycle the other dial controls the amount of time the power is turned on in each cycle.
- 3) Timing is controllable from 1/10 of a second up to several minutes. Play with your timing until the desired effect is achieved.

Examples of use would be blinking lights in a run down hospital or jail. Turning on 1 or more fog's in specific time intervals. You could also hook up 110v solenoids to make a kitchen full of cabinets bang in and out repeatedly. The possibilities are endless.
